

SNC/IMS Facilities

SNC/IMS is located in Hagerstown Maryland. Our facilities in Hagerstown provide a high quality world class facility, a one hour drive off the Washington DC beltway, also allows us to take advantage of significantly reduced employee, facility, and infrastructure costs. This location also provides the Government Team Leader easy access and the ability to assist and ensure successful program completion.

Located at the Hagerstown Washington County Airport the SNC/IMS facility consists of five hangars with over 100,000 sq/ft of hangar floor space and 45,000 of office space. This allows us to execute new programs while simultaneously executing ongoing programs. Our facilities meet or exceed all government standards. During a recent annual FAA inspection to ensure Part 145 compliance of our facilities, the FAA deemed our aviation operations one of the very best in the MD/DC/PA/VA area. The resident Government Flight Representative who ensures our compliance of DCMA 8210.1 standards believes we have a high quality excellent operation. During our ISO 9000-2001 inspection we were awarded a commendable rating. This continual outside monitoring of our capabilities ensures the customer's interests are well protected and continually represented.

Our hangar's are organized in a program centric manner, this allows us to bring all members of the team, both government and SNC/IMS together, which ensures program success. We collocate engineering, program managers, analysts, aviation managers, and floor personnel to ensure they work together as a single team focused on program execution. This approach has proven itself time and time again as we have fielded platform after platform in support of the Global War on Terror.
